the the roses and these groups of shrubs  
 the major birds of soil erosion in the area?  
 will plants more help stabilize?  
 or its just more boulders

black/white ducks in water x 4 together  
 young?  
 smaller than other species

(Asies)

(Pseudotsuga)

Actual for X2 among all of the DF?

° smooth grey bark.

° Flat soft, shiny leaves.

Why? Plat?

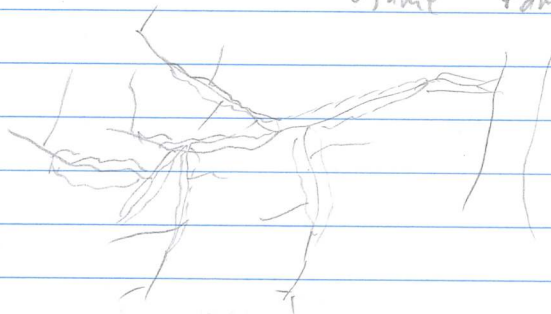

° Check if native to here or Iceland

° Check survey database

---

9:45 AM, Blackie spit, cloudy

Trees flayed out like Burning bush branches.  
same family?

° Only the ones exposed to outside.

° dark chocolate buds, alternate, now growth a bit fuzzy

° Much more common in bottom branches? at least more obvious
